

Nayan Jikar

Business Analyst (HealthTech) — Interview Preparation

Watch Your Health (WYH) · Thane, Maharashtra

About Watch Your Health (WYH)

Founded	2015 by Ratheesh Nair (CEO), Abhitosh Pandey, Jay Patel, Prachi Shinde
HQ	Thane, Maharashtra (also Bangalore & Dubai offices)
Model	B2B SaaS platform — serves insurance companies, pharma, hospitals, diagnostic labs
Core Product	Health engagement & digital wellness platform (B2B2C)
How it works	Tracks & rewards healthy behaviour of partner's end customers (policyholders, patients)
Revenue angle	Healthier customers = fewer insurance claims = cost savings for insurer clients
Funding	\$7.39M raised — Series A led by Cornerstone Ventures (India) & Conquest Global (Singapore)
Team size	200+ members
Key clients	Lal PathLabs, Madhavbaug Hospitals, Zydus Cadila, Glenmark, RenewBuy, United Healthcare India
Competitors	HealthifyMe, GOQii, Zyla, Vitality, Innovaccer

Telephonic Interview Script

PHASE 1 — Opening (first 60 seconds)

When they call / pick up:

"Hello, this is Nayan speaking — good [morning/afternoon]! Am I speaking with someone from Watch Your Health's HR team?"

Tip: Sound energetic, not robotic. Smile — it comes through on phone.

Self Introduction — when asked "Tell me about yourself":

"I'm Nayan Jikar, a final-year B.Tech student in AI and Machine Learning from DMIHER, graduating in 2026. I have around 8 months of industry internship experience — most recently at Rubixe.AI, a FinTech startup, where I worked as an AI and Data Science Consultant Intern. My work there was very aligned with what a Business Analyst does — I gathered business requirements from stakeholders, performed data analysis using Python and SQL, built MIS reports and KPI dashboards in Power BI, and communicated insights to non-technical teams. I also have a dedicated healthcare analytics project where I worked with real-world hospital data — which makes me especially excited about this HealthTech role at WYH. I hold dual IBM certifications in Data Science and Machine Learning, and I'm looking for a Business Analyst role where I can contribute to real business impact from day one."

Tip: Keep this under 90 seconds. Practice it once before the call.

PHASE 2 — Common Questions & Answers

Very Likely

Why do you want this Business Analyst role?

"I've always been at the intersection of data and business decisions — at Rubixe.AI, I wasn't just building models, I was translating them into operational insights for stakeholders. That work felt closest to what a Business Analyst does. Watch Your Health specifically excites me because of the HealthTech domain. I've done a healthcare analytics project involving hospital readmission data — I understand how critical data-driven decisions are in healthcare. The fact that WYH works with insurance companies, pharma, and hospitals makes this a very compelling environment for me to grow in."

Very Likely

Tell me about your experience with data analysis and reporting.

"At Rubixe.AI, I worked on a live FinTech analytics project — end-to-end data cleaning, EDA to identify revenue and risk trends, and translating findings into structured business reports for stakeholders. On the project side, I built an automated MIS reporting system in Excel using Python's openpyxl library that tracked 6 business KPIs monthly, and a 4-page Power BI dashboard monitoring revenue trends, delivery SLAs, and seller performance across 100,000+ orders. So both in internship and projects, I've had direct experience delivering reports that drive business decisions."

Very Likely

Do you have experience with documentation or requirement gathering?

"In my internship, I regularly documented analytical workflows and translated Python-based analysis into business-readable reports for stakeholders — which is closely related to functional documentation. I haven't written a formal BRD in a professional setting yet, but I understand the structure — capturing business objectives, functional requirements, constraints, and acceptance criteria — and I'm confident I can get up to speed quickly given my analytical background."

Tip: Be honest about BRDs but bridge it well. Don't oversell.

Likely

Have you worked with cross-functional teams?

"Yes — at Rubixe.AI, I regularly coordinated between the data team and business stakeholders, making sure analytical output was understood and actionable by non-technical people. I also worked with the MIT-WPU hackathon team and Dassault Systemes on a hardware-software project, which required close collaboration across disciplines. I'm comfortable being the bridge between technical and business teams — that's actually what I enjoy most."

Likely

Why are you open to relocating to Thane?

"I'm originally from Maharashtra — from Nagpur — so coming back to the Maharashtra region feels natural. Thane is a great professional hub, and I'm fully open to relocating for the right opportunity. This role at WYH is one I'm genuinely excited about."

Possible

What is your expected salary?

"The range mentioned in the job description — Rs.20,000 to Rs.25,000 — works for me at this stage. I'm focused on the growth opportunity and domain exposure more than just the number, especially since this is my first full-time role."

Tip: Don't negotiate aggressively on a telephonic round. Save that for offer stage.

Possible

When can you join?

"I graduate in June 2026, so I can join immediately after that. If there's urgency on your side, I'm happy to discuss options."

PHASE 3 — Questions to Ask Them

Always ask at least 1–2 questions. It shows genuine interest.

- Could you tell me more about the day-to-day work — which teams would the BA work most closely with?
- What does the onboarding process look like for this role?
- What are the key challenges the Business Analyst team is currently trying to solve?
- Is there a structured mentorship or learning path for someone joining at this level?

PHASE 4 — Closing Strong

"Thank you so much for the time — I really enjoyed learning more about the role. I'm genuinely excited about the opportunity to contribute to WYH's mission in digital health. I look forward to hearing about next steps!"

Your Answer: Key Responsibilities Fit

"Yes, absolutely. Most of these responsibilities directly map to what I've already done. At Rubix.AI, I was gathering business requirements from stakeholders, doing data analysis, and converting findings into structured reports — which covers requirement gathering, data analysis, and MIS reporting from your list. In my E-Commerce analytics project, I built a 4-page Power BI dashboard and automated monthly MIS reports tracking 6 KPIs — so dashboards, reporting, and documentation are things I've hands-on done. For BRDs and flowcharts — I haven't written a formal BRD yet, but I understand the structure and I'm a quick learner. Given my analytics background, picking that up will be fast. Cross-functional coordination and stakeholder communication — I've done that both in my internship and in my hackathon project with Dassault Systemes where we worked across teams. So overall, about 80% of this role I've directly done, and the remaining 20% like formal BRD writing I'm ready to learn on the job."

Resume Highlights to Mention in Interview

Healthcare Project

Diabetic Readmission Prediction — XGBoost, AUC 0.8761, HIPAA-analogous privacy architecture. Directly relevant to HealthTech.

MIS Reporting	Automated monthly MIS in Excel (openpyxl) tracking 6 KPIs across 100K+ orders — exact match to JD.
Power BI Dashboards	4-page Power BI dashboard (revenue trend, AOV, delivery SLA, seller performance) using DAX measures.
Stakeholder Communication	Translated Python-based analysis into structured business reports at Rubix.AI for non-technical stakeholders.
IBM Certifications	Dual IBM certifications in Data Science & Machine Learning (Coursera, 2024).
Hackathon Award	2nd Prize at MIT-WPU Hackathon — portable dialysis machine with Dassault Systemes. Shows cross-functional collaboration.

Pre-Call Checklist

- Keep this document open during the call for quick reference
- Charge phone fully — use a quiet, distraction-free space
- Practice the self-introduction once out loud before the call
- Lead with the healthcare project (Diabetic Readmission) — highly relevant to WYH
- Mention the B2B2C model understanding if you get a chance — shows company research
- Have your resume open — they may ask about specific dates or tools
- Ask at least 1 question at the end — shows genuine interest
- Confirm next steps before hanging up: 'What does the process look like from here?'
